

## Who are we?

Aspirer Research School was one of the first Research Schools created. We are based at Ash Grove Primary School in Macclesfield. Due to a high demand for support, we now have an Associate Research School in Stockport, based at Alexandra Park, and a Research Hub in Manchester, based at Wilbraham Primary School.

## What do we do?

We work with schools to implement evidence-informed practice. We help to translate the research into practical applications that schools can access. We run research breakfasts, twilights and a number of different courses all linked to current research. We also create bespoke training for individual schools or for large groups of schools.
